BRAKE BOOSTER and RELATED PARTS

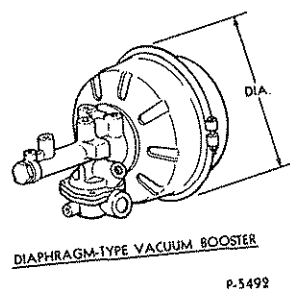

This section incl. the following-		Page			Page
A.	Brake Booster T.S.L. and Identification Cross-Reference Chart	2	C.	Bendix brake vacuum booster identification tag	1
B.	Illustration to identify booster types	1	D.	Model Application Chart	2
			E.	Brake Booster Components Parts Lists	6

HOW TO LOCATE BRAKE BOOSTERS and THEIR COMPONENTS

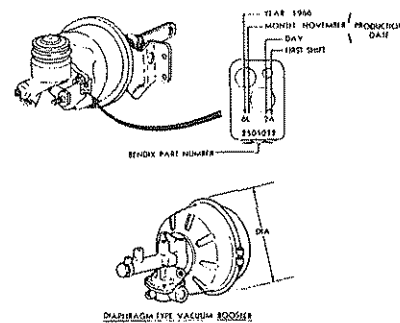

1. Use the identification tags
 - a. Ford trucks use Bendix or Midland-Ross boosters, and both types have an identification tag carrying the Ford production number and the manufacturer number. The illustration below shows how booster diameter is measured and shows the location of the identification tag on a Bendix booster.
 - b. Locate the tag on the booster and find the Ford number and manufacturer number.
 - c. Use the T.S.L. and Identification Cross-Reference Chart on page 2 to translate the Ford number or the manufacturer number into a service part number for the booster or the booster repair kit.
 - d. For component parts other than the booster (2005) or major repair kit (2309), refer to the Parts List column on page 2. These parts lists start on page 6.
2. Use the Truck Specification List (T.S.L.)
 - a. Locate the Ford production number shown on the T.S.L. in the box marked "Brake Booster Assy."
 - b. Use the T.S.L. and Identification Cross-Reference Chart on page 2 to translate the Ford production number into a service part number for the booster or the booster repair kit.
 - c. For component parts other than the booster (2005) or major repair kit (2309), refer to the parts list column on page 2. These parts lists start on page 6.
3. Use the Model Application
 - a. Determine the year and model of the truck by de-coding the truck warranty plate from the General Information Section of this Catalog.
 - b. Determine whether the unit has a single brake system (single fluid reservoir in brake master cylinder) or split brake system (two fluid reservoirs in brake master cylinder).
 - c. Use the Model Application Chart, starting on page 2 to determine the service part number of the booster needed.
 - d. For the repair kit (2309) and other component parts, it is necessary to know the Ford production number or the manufacturer number from the tag on the booster.
 - e. For the major repair kit (2309), obtain the Ford production number or manufacturer number from the booster tag, and then determine the service part number of the (2309) kit in the T.S.L. and Identification Cross-Reference Chart on page 2.
 - f. For booster components other than the repair kit (2309), obtain the Ford production number or manufacturer number from the booster tag, and then determine the parts list for these parts from the T.S.L. Identification Cross-Reference Chart on page 2. Turn to the Parts Lists, starting on page 6, and select the part needed.

HOW TO LOCATE BRAKE MASTER CYLINDER and REPAIR KIT

1. Use the Model Application
 - a. Determine the year and model of the truck by de-coding the Truck Warranty Plate from the General Information Section of this Catalog.
 - b. Determine whether the unit has a single brake system (single fluid reservoir in brake master cylinder) or split brake system (two fluid reservoirs in brake master cylinder).
 - c. Use the Model Application Chart, starting on page 2 to determine the service part number of the brake master cylinder needed.
 - d. The repair kit (2004) is listed in the Model Application Chart directly below the service master cylinder.
 - e. Component parts of the brake master cylinder such as cover (2162), gasket (2167), etc. will be found under their respective groups in this Catalog.

FRONT AXLE T.S.L. † CROSS REFERENCE GUIDE

1. Locate Front Axle part number shown on Truck Specification List.
2. Use the cross reference below to find the Front Axle parts list which contains service parts for that axle.
3. When a Truck Specification List is not available, refer to Section 30, page 2 for model Application Chart.

FRONT AXLE MODEL APPLICATION CHART

How to locate front axle parts using this chart:

1. Find truck series in first column (Truck series)
2. Find year of truck in second column (Year)
3. Find front axle capacity in fourth column (Front axle capacity-lbs.)
 When front axle capacity is not known, use one of the following methods to determine it:
 - a. Refer to the Truck Specification List (see previous page), if available.
 - b. Refer to the Truck Warranty Plate for the front axle code (See Front Axle Codes in the General Information Section).
4. Note proper front axle parts list in fifth column (Front axle parts list)
 EXAMPLE: 30.3A means Section 30.3 column A
5. Turn to front axle parts list shown in fifth column to locate part needed.
 Parts are listed in numerical order. If the basic number is not known, refer to the appropriate illustration, or to the alphabetical index.

3504 GEAR ASSY. (STEERING)

A. HOW TO FIND COMPLETE STEERING GEAR ASSEMBLY PART NUMBER

1. Using the Truck Specification List (T.S.L.)-
Determine the steering gear assembly part number from the T.S.L.
and refer to the T.S.L. Cross Reference Guide (page 2) to find the
correct service part number.
2. Using Truck Series year and front axle capacity-
Refer to model application chart (page 2) to find the correct steering gear.
3. Using the Identification Tag-
Refer to the "Identification Tag" column in the model application chart
(page 2) to find the correct service part number.

B. HOW TO FIND THE PART NUMBER FOR A COMPONENT PART OF A STEERING GEAR

1. Use one of the methods explained above to determine the steering gear
parts list number.
2. Find the parts list number for that steering gear in the T.S.L.
Cross-Reference Guide or the Model Application Chart.
3. Turn to the Parts List (starting on page 3) and find the component needed.
4. If the basic number is not known, refer to the illustration reference given
or the Alphabetical Index.

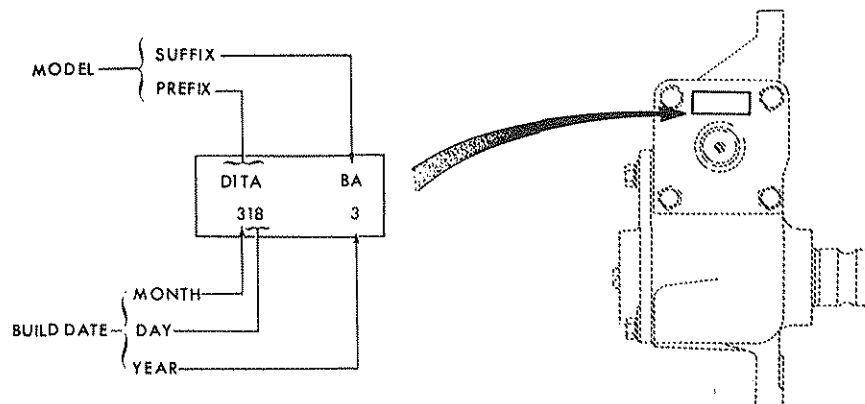

STEERING GEAR IDENTIFICATION TAG

The illustration below shows the general location of the gear identification tag, which
gives the gear assembly number, prefix and suffix.

Basic gear assembly numbers are usually the following-

3N503 Integral type power steering gear. (example-Ross HF-54 and HFB-64 gears)

3504 Manual or Power assist gear. (example-Ross 375, 408 and 504 gears)

P-10225

3A540 CYLINDER ASSY. (POWER STEERING DRAG LINK)
HOW TO FIND POWER STEERING CYLINDER ASSEMBLIES AND COMPONENTS

A - BY IDENTIFICATION CHART (see below)

1. Identifications are listed in numerical and alphabetical sequence.
2. Use the identification number to find a service part number for a cylinder assy. or to find a parts list number for the components of the cylinder.
3. As an additional aid, the page number of the cylinder illustration is given.

B - BY APPLICATION CHART (see below)

1. Find the required truck model, year and front axle capacity in the application chart.
2. To replace a cylinder assy., order the number shown in the PART NUMBER column. To repair a cylinder assembly, refer to the Parts List for component parts.
3. As an additional aid, the page numbers of the cylinder illustration and the power steering system illustrations are given.

HEAVY TRUCK POWER STEERING INSTALLATION PARTS

A program is available to supply dealers with all the components required to install power steering on heavy trucks built at the Kentucky Truck Plant. Orders should be placed with the dealer's facing distribution center and must include the year, model and serial number of the vehicle. THIS PROCEDURE IS ONLY APPLICABLE TO CURRENT PRODUCTION MODELS.

POWER STEERING HOSE REPLACEMENT CHART

1. Hose assembly part numbers are listed in part number sequence.
2. Keep old hose as a guide for length and shape.
3. Use details shown to assembly new hose assembly.
4. Fittings used for the replacement hoses are the reusable type.
5. Refer to Power Steering Hose Replacement Details Chart on page 13 of this section. for description of the replacing parts.

HOW TO FIND POWER STEERING PUMP and COMPONENTS

A. Using the Truck Specification List (T.S.L.) or Identification Number

1. Locate the power steering pump number shown on the T.S.L.
2. Find the power steering pump number located on the assembly.
Example: All Eaton pumps have the assembly number stamped on the relief valve cap.
3. Use the Cross Reference below to find the parts list which contains service parts for that pump.
4. When T.S.L. or Identification Number is not available, refer to the Model Application Chart following the Cross Reference Guide.

B. Using the Model Application Chart

1. Refer to the Application Chart by establishing vehicle year, model, engine and front axle capacity.
2. Refer to that parts list which is shown for the required application.
3. When basic number is not known, refer to the Illustration references shown on the chart or to the Alphabetical Index.

REAR AXLES and RELATED PARTS

HOW TO IDENTIFY REAR AXLE PARTS.

1. BY USING THE WARRANTY PLATE CODE.

Refer to page 25 of this section. Codes are arranged in alphabetical and numerical sequence.

2. BY USING THE APPLICATION CHART.

Refer to page 28 of this section.

3. BY USING THE AXLE TAG or DIFFERENTIAL CARRIER IDENTIFICATION NUMBER.

Refer to page 29 of this section. Illustrations showing the location of identification numbers (stampings and tags) appear on page 2 of this section.

4. BY USING THE TRUCK SPECIFICATION LIST (T.S.L.).

Refer to page 3 of this section.

5. BY USING REAR AXLE ILLUSTRATIONS.

a. Parts illustrations for rear axle components are published in Illustration Section 40 of the Truck Illustrations Catalog, Form FP 8473-B. For appropriate page number, see the Index at the beginning of Illustration Section 40, or refer to Truck Rear Axle Application Chart on page 28 of this section.

b. Find the basic group number from the illustration.

c. Use one of the methods above to determine the rear axle parts list number in Section 40.1.

d. Refer to the group in the catalog. Determine the part number needed from that group or follow cross-references to other groups to determine the number needed.

6. BY USING THE ALPHABETICAL INDEX.

a. An index listed alphabetically by part name showing the related basic or group number for rear axle parts is located at the beginning of this catalog.

b. Use the index to find the group number of the part.

c. Use one of the methods above to determine the rear axle parts list number in Section 40.1.

d. Turn to the proper parts list and select the part in the group desired.

7. BY USING CHARTS SHOWING DIMENSIONS or MARKINGS.

Refer to basic groups 4209 and 4234, in Sections 41 to identify these parts.

4 WHEEL DRIVE FRONT AXLES

Parts lists and appropriate information for identifying the parts lists for 4 Wheel Drive Front Axles are included in Section 30, page 1.

REAR AXLE SECTION ARRANGEMENT

The sections in the rear axle area are arranged in the following order. 40, 40.1 and 41.

Select the appropriate parts list number by using one of the above methods.

Refer to the affected parts list in Section 40.1 and determine part number of required parts.

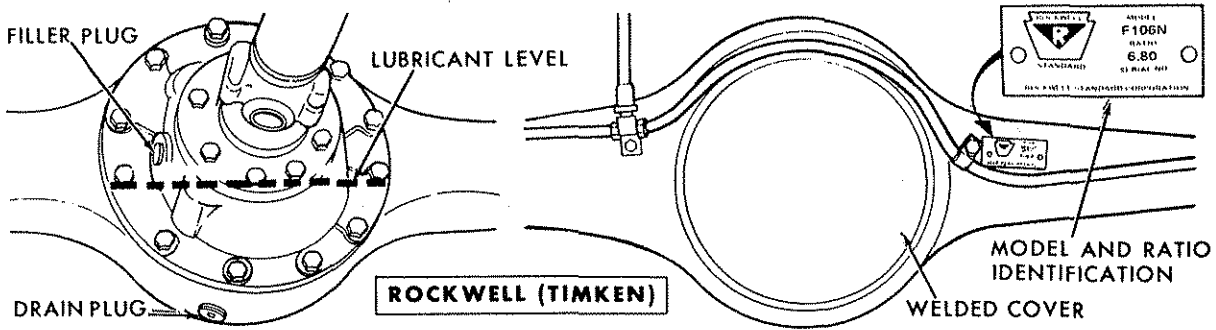

When available, complete Rear Axle Assemblies and Differential Carrier Assemblies are listed on page 33 thru 55 of this section.

1990/ TRUCK SERIES 600/900

REAR AXLE IDENTIFICATION NUMBERS

Rockwell (Timken) axles use identification numbers on the carrier or housing to help locate parts. Refer to page 29 of this section for a cross-reference from identification numbers to axle parts lists.

REAR AXLE IDENTIFICATION CHART

WHEN USING THE REAR AXLE IDENTIFICATION CHART,
THE TRUCK MODEL AND YEAR SHOULD BE VERIFIED FIRST,
AS THE MANUFACTURER'S AXLE MODEL AND CARRIER IDENTIFICATION
NUMBERS MAY BE THE SAME FOR TWO OR MORE AXLES.

P-22379

REAR AXLE T.S.L. † CROSS-REFERENCE GUIDE

1. Find the rear axle assembly number shown on the Truck Specification List (T.S.L.).
 2. Use the Cross-Reference below to find the proper rear axle parts list number.
 3. Turn to the rear axle parts list (in Section 40.1) and select the component part needed.
- Note. Complete axle assemblies and differential carrier assemblies which are available for service are listed by parts list number on page 33 of this section.

1990 REAR AXLE WARRANTY PLATE CODE CHART

For instructions on the use of the warranty plate codes, also for other methods of identifying rear axle parts and assemblies, refer to page 1 of this section.

If complete Axle Assembly or Differential Assembly is desired, find the Parts List Number in the rear axle T.S.L. Cross Reference Guide Page 3, then refer to page 29 of this section.

% Rockwell refers to Rockwell (Timken).

REAR AXLE and DIFFERENTIAL CARRIER ASSEMBLIES

Rear axle and differential carrier assemblies, although not normally stocked as service items, may be obtained from the nearest assembly plant when used in current production. Order through your local parts distribution center.

The chart which follows is in parts list number sequence. Refer to page 1 of this Section for information to identify rear axle and differential carrier assemblies by -

1. Warranty Plate Code. Page 25
2. Truck Model Application. Page 28
3. Differential Carrier or Axle Tag Identification. Page 29
4. Truck Specifications List (T.S.L.). Page 3

The rear axle assemblies vary as follows.

- 4005 - incl. shafts, less brakes, hubs and drums
- 4200 - less brakes, hubs, drums, shafts and housing
- 4300 - less brakes, hubs, drums, shafts and housing
- 4305 - incl. shafts, less brakes, hubs and drums
- 4A375 - incl. shafts, less brakes, hubs, drums and yoke (incl. yoke for production assemblies only)
- 4B430 - incl. shafts, less brakes, hubs, drums and yoke (incl. yoke for production assemblies only)

1. The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the integrity of the financial system and for the ability to detect and prevent fraud. The text notes that without reliable records, it would be difficult to verify the accuracy of financial statements and to identify any irregularities.

2. The second part of the document focuses on the role of internal controls in ensuring the accuracy and reliability of financial information. It describes how internal controls are designed to prevent errors and to detect any unauthorized transactions. The text highlights that internal controls are a key component of an organization's risk management strategy and are essential for maintaining the trust of stakeholders.

3. The third part of the document discusses the importance of transparency and accountability in financial reporting. It notes that organizations should provide clear and concise information about their financial performance and should be open to external scrutiny. The text emphasizes that transparency is essential for building trust and for ensuring that the financial system remains fair and equitable.

4. The fourth part of the document discusses the importance of regular audits in ensuring the accuracy and reliability of financial information. It notes that audits provide an independent assessment of an organization's financial statements and can help to identify any weaknesses in internal controls. The text emphasizes that regular audits are essential for maintaining the integrity of the financial system and for ensuring that organizations are held accountable for their financial performance.

HOW TO LOCATE DRIVE LINE PART NUMBERS

1. USE THE DRIVE LINE T.S.L. or STAMPED IDENTIFICATION NUMBER CROSS REFERENCE GUIDE.

Refer to page 6 of this section for a cross reference from stamped numbers on shaft or Truck Specification List (T.S.L.) driveshaft numbers to service part numbers.

2. USE THE DRIVESHAFT APPLICATION CHART.

- a. 1990 CF-CFT600/800 only. Refer to the stamped identification on the shaft and/or to vehicles T.S.L. for all other models.
- b. Manufacturer codes used throughout the chart are cross referenced as follows:

D-Dana	E - Eaton	R - Rockwell (Timken)
--------	-----------	-----------------------
- c. Universal joint, slip yoke and flange yoke codes used throughout the chart are cross referenced to service part numbers on the next page.
- d. The Driveshaft "Types" and the "A" and "B" designations are illustrated on page 5 of this section. Group 4602 is a shaft assy. and incl. the shaft, universal joints and the slip yoke. Group 4605 applies to the driveshaft only as shown on page 5 of this section. Various shafts listed throughout the Drive Line Cross are coded with symbol ϕ . After selecting the part number shown in the Driveshaft Reference Guide refer to page 19 of this section for the appropriate service replacement shaft. The service replacement shaft (4A603) incl. a new slip yoke. Service replacement shafts (4A603) are listed in part number sequence on page 31 of this section. The shaft length and diameter and also the slip yoke are shown for each shaft.
- e. Typical drive line and universal joint illustrations for single and tandem axles are shown on pages 3 and 4 of this section.
- f. Refer to section 46.2 for CF-CFT600/800 usage.

3. USE THE DRIVE and COUPLING SHAFT COMPONENT PARTS LIST.

When the part number for the complete shaft assembly is known, the part number of the shaft sub-assembly and related components may be found in the Drive and Coupling Shaft Component Parts List in section 46.1A.

4. USE THE DRIVE LINE ILLUSTRATIONS.

- a. Refer to the "Typical" drive line illustrations on pages 3 and 4 of this section to obtain a basic group number.
- b. Refer to the group number in the catalog. Determine the part number needed from that group or follow cross references to other groups to determine the part number needed.

5. USE THE ALPHABETICAL INDEX.

- a. Refer to the alphabetical part name index at the beginning of the catalog to obtain a basic group number.
- b. Refer to the group number in the catalog. Determine the part number needed from that group or follow cross references to other groups to determine the part number needed.

DRIVE SHAFT APPLICATION CHART INDEX

APPLICATION	SECTION	PAGE	APPLICATION	SECTION	PAGE
-------------	---------	------	-------------	---------	------

Components for complete shaft assemblies are also available for service. When the service part number for the complete shaft assembly is known, the part number of the shaft sub-assembly and related components may be found in the Drive and Coupling Shaft Component Parts List in Section 46.1A.

1990/ TRUCK SERIES 600/900

This Section cross-references driveshaft, coupling shaft, intermediate coupling shaft and inter transmission coupling shaft assemblies to optional component parts. To locate optional component parts do the following:

1. Find the shaft assembly number as shown in the Driveline Cross-Reference Guide Section 46.1, page 6 or the appropriate Shaft Application Chart.
2. Refer to the known Complete Shaft Assembly number below for the appropriate Shaft Sub-assembly and related components.

HOW TO FIND FRAME NUMBERS

1. USE MODEL APPLICATION CHART

Truck models are listed alphabetically beginning on page 2.

2. USE SECTION MODULUS●

a. Frames can be identified by the section modulus and P.S.I. which are shown in the Truck Data Book.

b. Section modulus is also shown in the Model Application Chart beginning on page 2 to aid in frame selection.

● "Frame section modulus" is the engineering term that indicates, for comparative purposes, the relative strength of two or more frames of the same supported length, shape and material. All other things being equal, the frame with the largest section modulus will have the greatest strength and stiffness, i.e., the ability to more effectively resist sagging under full loads. It takes into account frame depth, flange width and material thickness. "P.S.I." designates pounds of yield strength per square inch.

EXPLANATIONS OF NOTES AND ABBREVIATIONS APPEARING IN THE FRAME MODEL APPLICATION CHART

SERVICE NOTE:

- 1-long overhang without reinforcement
- 2-long overhang with reinforcement
- 3-short overhang
- 93 - frames must be ordered through special order department with vehicle serial number - - side rails prior to 1984 are not drilled

EXHAUST SYSTEMS MODEL APPLICATION CHART

How to find the part number for a component part of an exhaust system:

1. Find the truck model in the alphabetical Model Application Chart which starts below.
2. Find the Parts List Number for your unit.
3. Turn to the Parts List which follows the Application Chart and find the component needed.

(PARTS are LISTED from FRONT to REAR
...OR...
BOTTOM to TOP of the EXHAUST SYSTEM)

EXAMPLE: To find a muffler for a 1990 B600 with 370 gas engine, look first in the Model Application Chart for B600. Next, find "G" for "gas engine", "370" for 370 C.I.D. under model B600. Parts List 8 shows exhaust system parts for the model. Turn to Parts List 8 and find part number E4HZ 5230-E for the muffler.

5310 SPRING ASSY. (FRONT)						

HOW TO FIND A FRONT SPRING PART NUMBER

1. USE THE MODEL APPLICATION CHART

- a. Determine the year and model of the truck. (In addition, it may be necessary to know the number of leaves or the spring identification marking).
- b. Refer to the Model Application Chart (starting on page 3 of this section) to determine the correct service part number.
- d. SPRING RATING

There are two methods of describing spring ratings currently used in the trucking industry. They are (1) rating at the pad, and (2) rating at the ground. Both ratings are expressed in pounds. (Rating at Pad:) This figure represents the amount of weight above the pad which can actually be supported by the springs. This incl. the springs. This incl. the springs, chassis, body, and payload weights. (Rating at Ground:) This figure incl. the rating at pad plus the weight of components between the spring pad and ground. These components incl. axle, brakes, tires and wheels.

5560 SPRING ASSY. (REAR)

1. USE THE REAR SPRING MODEL APPLICATION CHART
 - a. Determine the year and model of the truck.
(In addition, it may be necessary to know the number of leaves, axle capacity, and rear axle type.)
 - b. Refer to the Rear Spring Model Application Chart (starting on page 4 of this section) to determine correct service part number.
 - c. Spring Rating
There are two methods of describing spring ratings currently used in the trucking industry. They are (1) rating at the pad, and (2) rating at the ground. Both ratings are expressed in pounds.
(RATING AT PAD): This figure represents the amount of weight above the pad which can actually be supported by the springs. This incl. the chassis, body and payload weight.
(RATING AT GROUND): This figure incl. the rating at pad plus the weight of components between the spring pad and ground. These components incl. axle, brakes, tires and wheels.

PULLEY IDENTIFICATION CHART

The purpose of this guide is to help determine service part numbers for crankshaft pulleys. Pulleys are identified with an engineering part number. Find the engineering number in the "IDENTIFICATION" column then order the number listed in the "SERVICE PART NUMBER" column. In some instances the service part number will have more sheaves than the original pulley; this is done to reduce the complexity of service parts.

HOW TO IDENTIFY TRANSMISSION PARTS

1. USE THE WARRANTY PLATE CODE:

- a. The transmissions (main & auxiliary) are identified by a code on the vehicle Warranty Plate.
- b. Refer to the General Information Section (under Warranty Plate Transmission Codes) to identify the transmission type and model.
- c. Refer to the Model Application Chart (starting on page 10) to find the Parts List number, or Illustration Section and Page number.
- d. Turn to the Parts List and select the component part desired.

2. USE THE TRANSMISSION CASE MARKINGS:

- a. Find a painted marking on the transmission case.
- b. Refer to the Transmission Identification Chart (starting on page 5) to find the Parts List number, or Illustration Section and Page number.
- c. Turn to the Parts List and select the component part desired.

3. USE THE TRANSMISSION IDENTIFICATION TAG:

- a. Find an identification tag or plate on the transmission case. (see pages 3 and 4 for illustrations showing locations).
- b. Refer to the Transmission Identification Chart (starting on page 5) to find the Parts List number, or Illustration Section and Page number.
- c. Turn to the Parts List and select the component part desired. (If the transmission case is replaced, transfer the tag to the new case so that identification will not be lost.)

4. USE THE MANUFACTURER'S NAME and MODEL NUMBER:

- a. Refer to the Model Application Chart (starting on page 10) to find the Parts List number for the model - example. A 1990 B600 truck with Fuller Model RT6610 identified E7HT-3UA uses Parts List number 70.10A.

5. USE THE TRUCK YEAR and MODEL:

- a. Refer to the Model Application Chart (starting on page 10) to find the Parts List number, or Illustration Section and Page number for the truck model (The chart is arranged by model year, within each model year, it is arranged by Truck Series.)
- b. Turn to the Parts List and select the component part desired.

6. USE THE THE TRUCK SPECIFICATION LIST (T.S.L.):

- a. Kentucky-built trucks contain a T.S.L.
- b. Locate the "Transmission Assy." number or "Auxiliary Transmission" number on the T.S.L.
- c. Use the Transmission Identification Chart (Page 5) to find the Parts List number.
- d. Turn to the Parts List and select the component part desired.

TRANSMISSION PARTS LIST INDEX

Parts lists are grouped by type and number of speeds and each group of related transmission parts lists is shown in a separate section. The section number can readily be identified with the transmission parts list numbers as shown in the following example:

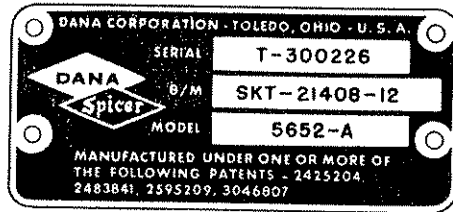

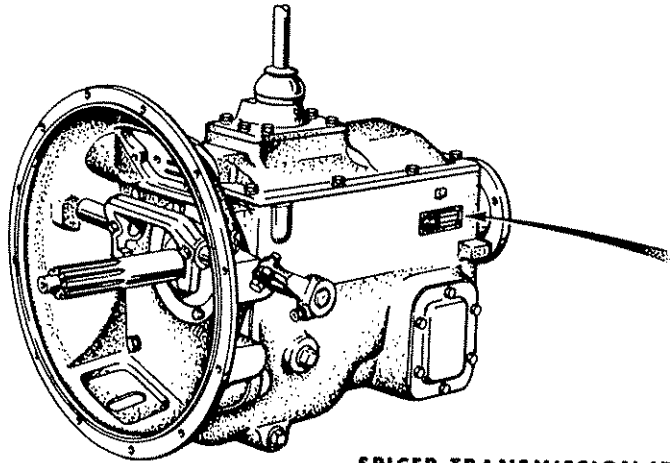

TRANSMISSION TYPE	NUMBER OF SPEEDS	PARTS LIST NUMBER	TRANSMISSION SECTION NO.
Clark/Fuller	5	5	70.5
Dana (Spicer)	5	5	70.5
Dana (Spicer)	7	7	70.7
Fuller	5	5	70.5
Fuller	6	6	70.6
Fuller	7	7	70.7
Fuller	8	8	70.8
Fuller	10	10	70.10
Fuller	9	9	70.9
Fuller	13	13	70.13
Fuller	15	15	70.15

Kit part numbers are shown in their respective parts lists. A listing of the components for each kit is shown in Section 70A.

Bearing and gasket overhaul not serviced. Refer to Federal Mogul catalog #502T
Order catalog on form #FPM 1310B, Heavy Truck Literature Order Form

Sections 70.1 thru 70.15 and 70A follow Section 70. Immediately following Section 70A, the Ford basic groups are continued in Section 71.

TRANSMISSION KIT PARTS LIST

Instructions for identifying Transmission Assemblies and their related Parts List Numbers are shown on Page 1 of Section 70.

Kit part numbers are included in their appropriate parts lists in Section 70.3 and up.

Included in this section is a listing of components for each kit.

Parts Lists for new kits will be added at the end of this section, irrespective of part number.

Always refer to the Index below for page numbers on which kit components are listed.

HOW TO FIND SERVICE PART NUMBERS FOR COMPONENTS OF GEARSHIFT TOWERS OR AUXILIARY GEARSHIFTS

1. Locate the number shown in the space marked "Gearshift Tower Assy." or "Auxiliary Gearshift Assy." on the Truck Specification List (T.S.L.)
2. Use the Cross-Reference below to find the Parts List Number. (T.S.L. number 7202 and 7210 have direct cross-reference to a service part number)
3. Refer to the appropriate parts list and select the desired component parts

The first part of the document discusses the importance of maintaining accurate records of all business transactions. This includes not only sales and purchases but also expenses and income. Proper record keeping is essential for tax purposes and for monitoring the financial health of the company.

The second part of the document focuses on the importance of budgeting and financial planning. A well-defined budget helps management understand the company's financial goals and how to achieve them. It also provides a baseline for measuring performance and identifying areas for improvement.

The third part of the document discusses the importance of controlling costs. This involves identifying areas where expenses can be reduced without sacrificing quality or productivity. Cost control is a key factor in improving profit margins and overall financial stability.

The fourth part of the document addresses the importance of financial reporting. Regular reporting provides management with the information needed to make informed decisions. It also ensures transparency and accountability to stakeholders.

The fifth part of the document discusses the importance of risk management. This involves identifying potential risks to the company's financial health and developing strategies to mitigate them. Risk management is a critical component of long-term financial success.

The final part of the document provides a summary of the key points discussed and offers recommendations for implementing the discussed practices. It emphasizes the need for ongoing monitoring and adjustment to ensure the company remains on track with its financial goals.

RADIATOR CROSS REFERENCE GUIDE

- A To use this guide
1. Find the identification marking on radiator top tank or the side mounting bracket.
 2. Locate this number in the identification column below.
 3. Read across to next column to right to find the service number.
- B If the radiator identification is not known, the pages following this guide have radiator part numbers arranged in the following order:
1. Truck Series
 2. Model years
 3. Number of cylinders
 4. Cubic inch displacement

8260 HOSE (RADIATOR)

RADIATOR HOSE LOCATIONS (TYPICAL)

HOSE USAGE- Where more than one upper or lower hose is used, see the "Location" column to find the hose used from pipe-to-radiator (R), pipe-to-engine (E), or oil cooler (O).
Motorcraft numbers as they appear in the model application chart which follows can be used to determine diameter and length of the hose as explained below.

**FLEXIBLE
RADIATOR HOSE**

**FIRST LETTER PREFIX:
SECOND LETTER PREFIX:**

- K - Designates the hose line in all cases.
- A - Designates 1 1/4" inside diameter at end opening.
- B-Designates 1 1/2" inside diameter at end opening.
- C-Designates 1 3/4" side diameter at end opening.
- D-Designates 2" inside diameter at end opening.

NUMBERS:

(There must always be a three digit numeral). First two digits designate the amount of full inches of hose length. Third digit designates the remaining fraction of an inch (expressed in eighths of an inch) of hose length.

EXAMPLE:

- KAB-194-Flexible radiator hose having a 1 1/4" inside diameter at one end and a 1 1/2" inside diameter at the other end opening and a hose length of 19 1/2".
- KC-092 - Flexible radiator hose having a 1 3/4" end opening inside diameter at both ends and a hose length of 9 1/4".

**MOLDED
RADIATOR HOSE**

**FIRST LETTER PREFIX:
SECOND and THIRD LETTER PREFIX:**

- K - Designates the hose line in all cases.
- M - Designates the molded curved type hose.
- S - Designates the moulded straight type hose.

NUMBERS:

Sequential numbering system beginning with the numeral "1".

EXAMPLE:

- KM-174 - Motorcraft moulded curved radiator hose.
- KS-7 - motorcraft moulded straight radiator hose.

8620 BELT (DRIVE)

DRIVE BELTS HOW TO IDENTIFY FAN BELTS

1. By size and length - the Motorcraft Part Number allows you to determine belt size as explained below.

FIRST LETTER PREFIX: J-Designates the V-belt in all cases

SECOND LETTER PREFIX:	Designates	Top width of belt	Designates	Top width of belt
	A	13/32"	G	7/8"
	B	15/32"	H	1/4"
	C	1/2"	M	19/32"
	D	5/8"	P	23/32"
	E	11/16"	R	17/32"
	F	3/4"		

NUMBERS: (There must always be a three digit numeral)

First two digits designate the amount of whole inches of outside circumference of the belt.

Third digit designates the remaining fraction of an inch (expressed in eighths of an inch) of outside circumference of the belt.

LETTER SUFFIXES: Suffixes will designate special types of V-belts-

C-for cog belts,

L-for laminated belts

EXAMPLES: *JB-493-L-Laminated belt with 15/32" top width and 49 3/8" outside circumference.

*JF-535-C-Cog belt with 3/4" top width and 53 5/8" outside circumference.

2. By identification marking-refer to following chart.

3. By year, model and application-refer to listing beginning on page 8 of this section.

BELT IDENTIFICATION MARKING TO SERVICE PART NUMBER GUIDE

The purpose of this guide is to help find service part numbers for fan belts. Belts are identified with a marking on the outer (wide) surface of the belt. Although the identification marking and service part number may be the same in some instances, this is not generally true. Find the belt marking in the "Belt Identification Marking" column, then order the number listed in the "Service Part Number" column.

Following the guide chart, belt part numbers are listed by model year to help find service part numbers when the belt marking is not known.

9D475 VALVE ASSY. (EXHAUST GAS RECIRCULATION)

To select the correct EGR valve by knowing the identification number only:

- Check the EGR valve, taken from the vehicle, for an identification part number.
- Refer to the Identification Chart below.
- Find the EGR valve identification part number (sequenced numerically) and find the service part number in the adjacent column.

For example:

The service part number for EGR valve identified E08E 9D475-B1A or E08E 9D475-B2A is E0BZ 9D475-B

For Model Application, refer to Calibration Parts Lists in Section 93A.

FORD ENGINE CALIBRATIONS DETERMINING VEHICLE CALIBRATION

IMPORTANT NOTE: To determine the CALIBRATION CODE on 1981 and early 1982 production engines, follow steps 1 through 4 as shown and described in Items A and B. To do this, you will be required to look at the Vehicle Emission Decal to determine Steps (1) and (2). For Steps (3) and (4) look at the Calibration Label for

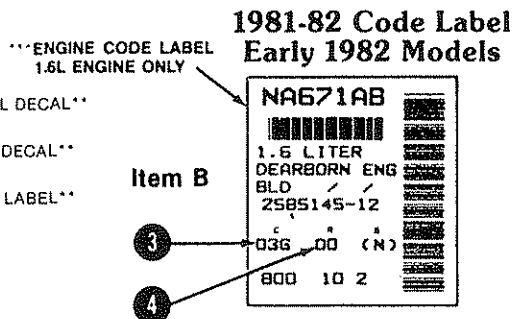

the additional information you'll need. Then follow instructions in steps 1 through 4 listed below. For later production 1982 models you will only need to look at the CALIBRATION CODE Label as shown in Item C, Step 1A.

ALL 1981 AND EARLY 1982 MODELS

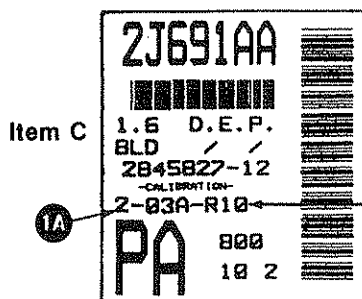

NOTE: Some calibrations are carried over from prior model years. If you cannot locate calibration number using "2" prefix, check "1", "0", "9", "8", "7", or "5" prefixes.

- 1 DETERMINE ENGINE DISPLACEMENT FROM EMISSION CONTROL DECAL**
___ ENTER IN BLANK "A" OF EXAMPLE SHOWN BELOW.
 - 2 DETERMINE VEHICLE MODEL YEAR FROM EMISSION CONTROL DECAL**
___ ENTER LAST DIGIT IN BLANK "B". SEE EXAMPLE BELOW.
 - 3 DETERMINE CALIBRATION BASE NUMBER FROM ENGINE CODE LABEL**
___ ENTER NUMBERS AND LETTERS IN BLANK "C".
 - 4 DETERMINE REVISION LEVEL FROM ENGINE CODE LABEL*
___ ENTER IN BLANK "D".
- (A) (B) (C) (D)
- EXAMPLE: ENGINE: 3.3L (200 CID) CALIBRATION 2 — 12B — R10

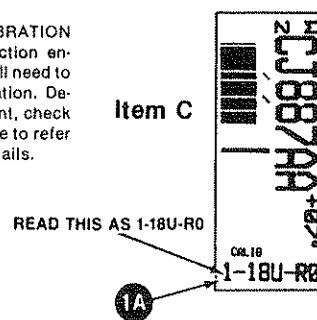

LATE PRODUCTION 1982 (AND LATER) MODELS

IMPORTANT NOTE: These CALIBRATION DECALS affixed to late 1982 production engines, contain all the information you'll need to determine the correct engine calibration. Depending upon the engine displacement, check by looking at Step 1A. You *do not* have to refer to the Vehicle Emission Decal for details.

- READ THIS AS 2-3A-R10
- *Located on engine valve cover. (Yellow or White)
 - **Located on engine valve cover, radiator support bracket, underside of hood or fresh air inlet tube (Gold or Silver), or windshield washer bottle.
 - ***Located on Timing Chain Cover.

NOTE: Calibration codes are listed in computer language. Thus, Read: 00 as 0, 03 as 3, etc.

Once the calibration and revision level are determined, refer to the "Calibration Number to Parts List Cross Reference Chart" on page 2. Calibration numbers are also shown by vehicle and engine application in the "Model Application to Parts List Cross Reference Chart" on page 3. Find the corresponding 1980/ calibration number and the part list number. For detailed part number information, refer to the appropriate Parts List No. in Section 93B.

Example: If the calibration number and revision level shown on the engine code label are "0-01B" and "R0", the Calibration Parts List No. is 1.

HOW TO IDENTIFY CARBURETORS and RELATED PARTS

To facilitate the identification of parts for a specific carburetor, parts lists or bills of material are provided in Section 95.1 and up of this catalog for each carburetor assembly. It is necessary first to identify the carburetor assembly per the instructions that follow.

Carburetors can be identified by the stamping number shown on the carburetor or on a metal tag attached to the carburetor.

Each carburetor for 1990/ models has an identification tag. An illustration and explanation of the carburetor identification tags are shown on Page 2 of this section.

If either the tag or stamping identification number is known, the related carburetor and carburetor parts list numbers can be determined from the Chart beginning on Page 2 of this section.

Carburetors and related parts lists are also identified by the Engine Calibration number Cross Reference Chart and by Year, Model, and Engine in the Model Application Cross Reference Chart. These charts are shown in Section 93A.

Carburetor illustrations are shown in Illustration Section 95 of Form FP 8473-B.

Parts lists are grouped by type and engine and each group of related carburetor parts lists is shown in a separate section. The section number can readily be identified with the carburetor parts list numbers as shown in the following example:

Carburetor Type	No. of Cyl.	Engine C.I.D.	Parts List Number	Catalog Section No.
Holley 2/B	8	370	1A, 1B	95.1

For ready reference, kit part numbers are shown with the carburetor identification guide. A listing of components for each kit is shown in Section 95A. Refer to the Index at the beginning of Section 95A for page number of service kit.

Carburetor attaching parts are shown at the beginning of their respective parts lists.

To identify the parts for a specific carburetor it is only necessary to refer to the related parts list and parts illustration.

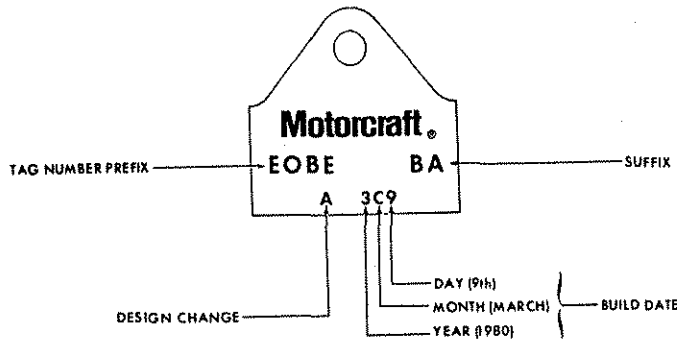

An Alphabetical Index showing a cross-reference between noun description and Basic Group number is located at the beginning of this catalog.

IMPORTANT: ALWAYS FURNISH APPROPRIATE WARRANTY PLATE INFORMATION and DSO NUMBER IF APPLICABLE WHEN ORDERING PARTS NOT LISTED IN THE CATALOG.

CARBURETOR KIT COMPONENTS

Instructions for identifying Carburetor Assemblies and their related Parts List Numbers are shown at the beginning of Section 95.

For ready reference, kit part numbers are shown in the carburetor identification chart-Section 95.

Included in Section 95A is a listing of components for each kit.

Parts Lists for new kits will be added at the end of this section, irrespective of part number.

Always refer to the following Index for page numbers on which components are listed.

ALTERNATOR MOUNTING PARTS

Alternator mounting parts are listed in chart form following the illustration below. Refer to the illustration to determine the name of the part required. Refer to the chart to select the appropriate part number. The chart is listed by year, series, engine and alternator make and amperage.

Attaching parts such as bolts, nuts, etc. are listed by code number. A listing of the code numbers and their corresponding part numbers and descriptions appears at the end of the chart.

ALTERNATOR IDENTIFICATION and/or T.S.L. CROSS REFERENCE GUIDE

HOW TO FIND ALTERNATORS and COMPONENTS

- | | |
|--|--|
| <p>By IDENTIFICATION on ALTERNATOR:</p> <ol style="list-style-type: none"> 1. Locate marking (on alternator housing). 2. Check marking listed under Alternator Identification Chart below to find part number of service alternator, pulley, fan & spacer. | <p>By MODEL IDENTIFICATION:</p> <ol style="list-style-type: none"> 1. Refer to Alternator Application Chart beginning on page 13 2. Refer to appropriate Year, Model and Engine. |
|--|--|

By IDENTIFICATION on TRUCK SPECIFICATION LIST: †
† Included with all trucks built at Louisville

1. Locate Alternator number shown on Truck Specification List.
2. Check Alternator number against identification numbers listed below to find part numbers of service Alternator, Pulley, Fan & Spacer.
3. Select and refer to appropriate Parts List Section and Number.
4. If basic number is not known refer to Illustration Page shown, or to Index following the General Information Section of this Catalog.
5. Select part number shown for affected Parts List. If more than one part number is shown refer to Description and Restrictions for clarification.
6. Quantity of parts shown in columns A, B or C etc.
7. Parts are listed numerically.

IDENTIFICATION EXAMPLE: D4HF 10300-AA is listed in Parts List Section 103.3 Column A.

MODEL APPLICATION EXAMPLE: 1990 CL-CLT900 uses 90 amp. Alternator (D7HZ 10346-A). Internal parts for this Alternator are listed in Parts List Section 103.3 Column 3A.

TRUCK SPECIFICATION LISTS EXAMPLE: D4HF 10300-AA appears on a Truck Specification List. The service alternator for this number is D7HZ 10346-A and internal parts for this Alternator are listed in Parts List Section 103.3 Column 3A.

10732 BATTERY MOUNTING PARTS

Battery mounting parts are listed in chart form following the illustrations below. Refer to the illustration to determine the name of the part required. Refer to the chart to select appropriate part number. The chart is listed by year, model and amperage of battery.

Attaching parts such as bolts, nuts, etc. are listed by code number. A listing of code numbers and their corresponding part numbers and descriptions appears at the end of the chart.

*NOT INCLUDED IN CHART-REFER TO GROUP FOR COMPLETE PART NUMBER

11001-2 STARTER MOTOR

HOW TO FIND STARTERS and COMPONENTS

By IDENTIFICATION:

1. Refer to Identification chart below.
2. Check marking (on starter housing) against identification numbers.
3. Select and refer to appropriate Parts List Section and Number.
4. If basic number is not known refer to Illustration Page shown, or to the Alphabetical Index which follows the General Information section of this catalog.
5. Select part number shown for affected Parts List. If more than one part number is shown refer to Description and Restrictions for clarification.
6. Quantity of parts shown in columns A, B or C etc.
7. Parts are listed numerically.

By MODEL APPLICATION:

1. Refer to Model Application Chart beginning on page 2.
2. Refer to appropriate Year, Model and Engine.

Identification Example E1HT 11001-AA is listed in Parts List Section 110.1, Column A.

Model Application Example 1990 F600 (8 cylinder Gas) uses starter E1HZ 11002-A. Internal parts for this starter are listed in Parts List Section 110.1, column A.

12A091 VALVE ASSY. (DISTRIBUTOR VACUUM CONTROL)—Also refer to group 12A208

To select the correct VACUUM CONTROL valve by knowing the identification number only:

- Check the VACUUM CONTROL valve, taken from the vehicle, for an identification part number.
- Refer to the Identification Chart below.
- Find the VACUUM CONTROL valve identification part number (sequenced numerically) and find the service part number in the adjacent column.

For example:

The service part number for VACUUM CONTROL valve identified D5TE-BA is D5TZ 12A091-A

For Model Application, refer to Calibration Parts Lists in Section 93A.

12127 DISTRIBUTOR ASSY.

HOW TO FIND DISTRIBUTORS and COMPONENTS

To find Distributor Parts:

By IDENTIFICATION:

- (1) Refer to Identification Chart below.
- (2) Check marking (on distributor) against identification numbers to determine part numbers of service distributor, adapter, cap, diaphragm assembly and rotor.
- (3) If group number is not known refer to illustration page shown, or to the Alphabetical Index which follows the General Information Section of this catalog.

By MODEL APPLICATION:

- (1) For model application, refer to Calibration Parts Lists in Section 93A.

Serviceable distributor components which do not show in the chart below are cataloged in the normal group sequence in Section 120 providing they do not affect distributor calibration.

Those parts which do affect distributor calibration are available only to authorized rebuilders.

WIRING MARKING or TAG NUMBER TO SERVICE WIRING PART NUMBER GUIDE

The purpose of this guide is to facilitate the identification of the Service Wiring Part Number. The chart that follows lists the Wiring Markings or Tag Numbers in numerical sequence. For many vehicles the Service Wiring Part Number will be the same as the Wiring Marking or Tag Number. This type of replacement will cause little or no installation problems. However, when the Service Wiring differs from the Wiring Marking or Tag Number it will be necessary to match lead wires and to tape up those lead wires which are not required. This is necessary when the Service Wiring has a more general application than the original wiring installed by the factory. Following this guide chart, Service Wiring Part Numbers are listed by model year and vehicle usage which will permit the identification of replacement wiring when the wiring identification marking or tag number is not known.

IMPORTANT Always furnish appropriate warranty or rating plate information and DSO number if applicable when ordering parts not listed in the catalog.

14300 CABLE ASSY. (BATTERY UNIVERSAL TYPE)

Battery cable terminals (battery end) are universal and may be used on either the positive or negative battery post. Battery cable length is determined by distance between hole centers.

WIRING MARKING or TAG NUMBER TO SERVICE WIRING PART NUMBER GUIDE

The purpose of this guide is to facilitate the identification of the Service Wiring Part Number. The chart that follows lists the Wiring Markings or Tag Numbers in numerical sequence. For many vehicles the Service Wiring Part Number will be the same as the Wiring Marking or Tag Number. This type of replacement will cause little or no installation problems. However, when the Service Wiring differs from the Wiring Marking or Tag Number it will be necessary to match lead wires and to tape up those lead wires which are not required. This is necessary when the Service Wiring has a more general application than the original wiring installed by the factory. Following this guide chart, Service Wiring Part Numbers are listed by model year and vehicle usage which will permit the identification of replacement wiring when the wiring identification marking or tag number is not known.

WIRING IDENTIFICATION and/or T.S.L. CROSS-REFERENCE GUIDE

1. How to use the Truck Specification List (T.S.L.) to locate a dash panel-to-engine wiring service part number:
 - a. Locate the dash panel-to-engine wiring part number shown on the Truck Specification List.
 - b. Use the Cross-Reference below to find the correct service part number. NOTE: when the service wiring differs from the original wiring, it will be necessary to tape up unused lead wires.
2. How to use tag numbers or markings to locate a dash panel-to-engine wiring service part number:
 - a. Locate a tag number or marking on the dash panel-to-engine wiring of the truck.
 - b. Use the Cross-Reference below to find the correct service part number. NOTE: when the service wiring differs from the original wiring, it will be necessary to tape up the unused lead wires.
3. If a T.S.L. or marking is not available, obtain the truck model and year and refer to the model application listing below to locate the correct wiring part number.

IMPORTANT Always furnish appropriate warranty or rating plate information and DSO number if applicable when ordering parts not listed in the catalog.

WIRING IDENTIFICATION and/or T.S.L. CROSS-REFERENCE GUIDE

1. How to use the Truck Specification List (T.S.L.) to locate a cowl wiring service part number:

- a. Locate the cowl wiring part number shown on the Truck Specification List.
- b. Use the Cross-Reference below to find the correct service part number.

NOTE: When the service wiring differs from the original wiring, it will be necessary to tape up unused lead wires.

2. How to use tag numbers or markings to locate a cowl wiring service part number:

- a. Locate a tag number or marking on the cowl wiring of the truck.
- b. Use the Cross-Reference below to find the correct service number.

NOTE: When the service wiring differs from the original wiring, it will be necessary to tape up unused lead wires.

3. If a T.S.L. or marking is not available, obtain the truck model and year and refer to the model application chart which follows the Identification Chart.

IMPORTANT

Always furnish appropriate warranty or rating plate information and DSO number if applicable when ordering parts not listed in the catalog.

WIRING MARKING or TAG NUMBER TO SERVICE WIRING PART NUMBER GUIDE

The purpose of this guide is to facilitate the identification of the Service Wiring Part Number. The chart that follows lists in numerical sequence the Wiring Markings or Tag Numbers. For many vehicles the Service Wiring Part Number will be the same as the Wiring Marking or Tag Part Number. This type of replacement will cause little or no installation problems. However, when the Service Wiring differs from the Wiring Marking or Tag Number it will be necessary to match lead wires and to tape up those lead wires which are not required. This is necessary when the Service Wiring has a more general application than the original wiring installed by the factory.

Following this guide chart, Service Wiring Part Numbers are listed by model year and vehicle usage which will permit the identification of replacement wiring when the wiring identification marking or tag number is not known.

HOW TO FIND SPEEDOMETER and TACHOMETER ADAPTERS

There are three ways of determining the part number of a speedometer or tachometer adapter.

BY PHYSICAL SHAPE, IDENTIFICATION or BY APPLICATION

BY PHYSICAL SHAPE

YOU MUST KNOW- Physical shape
Ratio

BY IDENTIFICATION

YOU MUST KNOW- Identification number

EXAMPLE

Physical shape conforms to-
TYPE-9A
RATIO-1.11
IDENTIFICATION NUMBER-D2TA 17294-AA or 777-AL
PART NUMBER listed is-D2TZ 17294-A

BY APPLICATION

SPEEDOMETER ADAPTER

TACHOMETER ADAPTER

YOU MUST KNOW- Year

EXAMPLE

YEAR-1990
MODEL-LN700
TRANSMISSION-AT-540
RATIO-1.11 to 1
SINGLE or TWO SPEED AXLE-Single
PART NUMBER listed is-D2TZ 17294-A

YEAR-1990
MODEL-L900 -- line haul instrument panel
ENGINE-Detroit 8V-71
RATIO-1.05 to 1
LOCATION-Located on cowl
PART NUMBER listed is-D0HZ 17294-D

17285-17322 SPEEDOMETER GEARS (DRIVE and/or DRIVEN)

A. HOW TO FIND MECHANICAL SPEEDOMETER DRIVE and DRIVEN GEAR PART NUMBERS

There are two ways of determining the part number of a speedometer drive or driven gear.

BY IDENTIFICATION or BY APPLICATION

BY IDENTIFICATION

YOU MUST KNOW- Physical shape
Number of teeth
Identification number - Listed on Truck Specification List (T.S.L.) or stamped on physical part

EXAMPLE

DRIVEN GEAR (17322)
(PAGE 2)

Physical shape conforms to-
TYPE-7
IDENTIFICATION NUMBER-
EOHT-17322-BRA
NUMBER OF TEETH-16
PART NUMBER listed is-E0HZ 17322-BR

DRIVE GEAR (17285)
(PAGE 5)

Physical shape conforms to-
TYPE-9
IDENTIFICATION NUMBER-
EOHT-17285-AH
NUMBER OF TEETH-6
PART NUMBER listed is-E0HZ 17285-AH

BY APPLICATION

YOU MUST KNOW- Year
Transmission
Rear axle Ratio
Tire Size

EXAMPLE

YEAR-
TRANSMISSION-
REAR AXLE RATIO-
TIRE SIZE-

1980
Fuller RT-610
5.83 to 1
11 x 22

DRIVE GEAR part number listed is E0HZ 17285-AH

DRIVEN GEAR part number listed is E0HZ 17322-BR

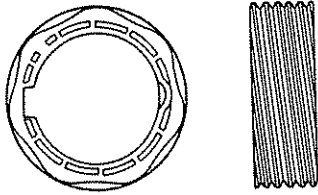

B. HOW TO FIND ELECTRONIC SPEEDOMETER COMPONENTS

1. FOR ROTOR GEARS INSIDE THE TRANSMISSIONS
REFER TO BASIC GROUP 17385 AT THE END
OF THIS SECTION.
 2. FOR SENSORS, REFER TO GROUP 17B384 IN
SECTION 170.
 3. FOR SPEEDOMETER DIALS REFER TO GROUPS 17255.

SHOCK ABSORBER IDENTIFICATION CHART

The production number is stamped on the barrel of each shock absorber as an identification marking. The following chart will provide quick identification of the service kit number when the identification marking is known. Also shock absorber kits may be selected by model, year and description under group numbers 18124 and 25 which follow the chart. Shock absorber kits include insulators, bolts, nuts and washers.

19C705-8 REFRIGERANT LINE REPLACEMENT and REPAIR PARTS

To simplify part number determination and complexity and to reduce look-up time for air conditioning hoses the following summary describes the various service methods:

1. Hose originally used in production is serviced.

Example; Original production part number E0HT 19867-AB is supplied for service as part number E0HZ 19867-A as shown on page 10 of the IDENTIFICATION CHART and on page 8 of the APPLICATION CHART.

2. Hose originally used in production is not supplied for service and has been replaced by detail parts i.e. bulk hose (which must be cut to length) and assorted fittings.

Detail parts include:

Push-on type tube fittings (includes clamps and "o" rings) and bulk hose. Original production hose assemblies are fabricated from bulk hose (cut to length indicated) and add necessary fittings (listed by code number and cross-referenced to part number on page 16).

Example: Original production part number D0HA 19972-AS is replaced by 78 inches of 13/32" I.D. bulk hose (part number D2AZ 19C708-B) and one each of fitting code J44 which cross-references to fitting service part number D2AZ 19D695-AJ and fitting code ZE6 which cross-references to fitting service part number D2AZ 19D695-CD. The original production part number D0HA 19972-AS is shown on page 10 of the IDENTIFICATION CHART and on page 9 of the APPLICATION CHART. The fitting code number to part number CROSS-REFERENCE CHART is shown on pages 11 thru 18

Air Conditioning hose information is listed as follows:

	PAGE
INSTALLATION INSTRUCTIONS	1 through 5
APPLICATION CHART	6 through 12
IDENTIFICATION CHART	13 & 15
FITTING CROSS-REFERENCE CHART	16 through 23

More detailed instructions are included with the IDENTIFICATION CHART, APPLICATION CHART and FITTING CROSS-REFERENCE CHART.

INSTALLATION INSTRUCTIONS

HOSE GUARDS

FOAM RUBBER SLEEVE: To protect 5/8" rubber air conditioner hose from direct rubbing against other parts and to reduce hose vibration noise.

ALUMINUM SLEEVE: To protect 13/32" discharge hose where hose contacts sharp edges in routing through the radiator side support.

1. Slide sleeve on hose before installing end fittings.

NOTE: Sleeve can be cut lengthwise and formed around other hose sizes.

2. Use C0AZ 19552-A or 8A 19552-B adhesive to secure sleeve in desired position.

INSTALLATION INSTRUCTIONS - continued

DETAIL PARTS and HOSE ASSEMBLIES

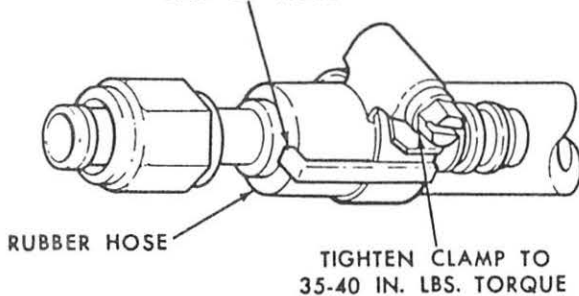

1. Note defective hose routing before removal.
2. Repair existing rubber or nylon hose on vehicle if feasible.
 - a. Repair cuts and similar failures, in otherwise sound existing hose assemblies, by using one push-on hose splicer or two splicers with required length of bulk hose.
3. Remove defective hose if splicing is not acceptable.
 - a. Discharge the system if not completely discharged, following the procedure outlined in the shop manual.
 - b. For those liquid lines (5/16" I.D.) having a self-sealing, quick disconnect coupling on one end, the coupling should be left on the vehicle. The new hose assembly will adapt into this coupling with 1/2"-20 male thread and an external o-ring seal.
4. Assemble the new hose as shown below if component parts are used.

**PUSH FITTING INTO HOSE BY HAND
WITH ROTATING MOTION
TO SHOULDER OR BEAD OF FITTING**

- a. Select proper end fittings, splicers, hose guards, and hose size required to replace the original hose assembly. A visual comparison is required for applications not listed.
- b. Cut hose to required length. Keep ends square and remove loose fragments.
- c. Lubricate barbed end of fittings and splicers with a few drops of clean refrigerant oil.

**ALIGN SPACER BAR TO
END OF HOSE**

- d. Slide loose clamps on hose, force fittings into hose (by hand) with rotating motion.

CAUTION: Do not go past shoulder or scratch fitting with tools, this fitting must be inserted by hand.

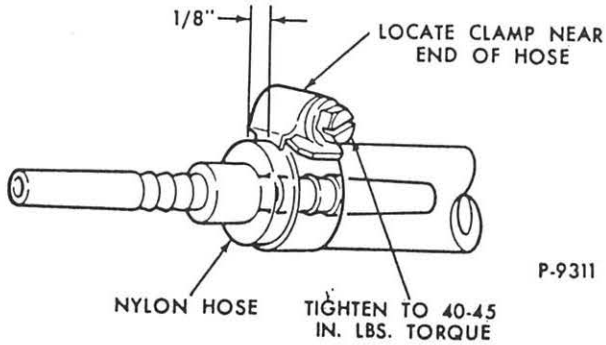

- e. Position clamp so that spacer tab is over end of rubber hose and tighten until clamp starts to cut hose (Tighten to 35-40 in. lbs. torque)

INSTALLATION INSTRUCTIONS - continued

DETAIL PARTS and HOSE ASSEMBLIES - continued

- f. For nylon hose splicers only, position clamp approx. 1/8" from end of hose (tighten to 40-45 in. lbs. torque)

P-9311

5. Route the new hose, using the original installation as a guide.
If simplified hose with aluminum tubing and splicer is used, bend the tubing as outlined below:

- a. Bend the aluminum tubing by hand to replace the bends of the original hose, making the bends as simple as possible.
- b. Drill new holes through the radiator support and side shield as required to make the installations using simplified tube bends.

6. Install and torque new hose assembly.

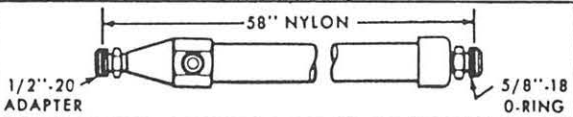

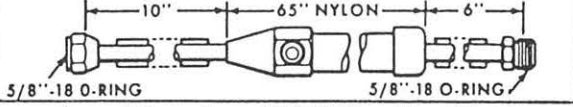

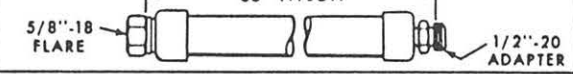

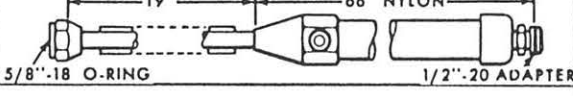

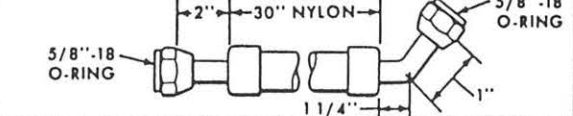

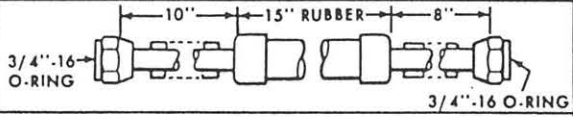

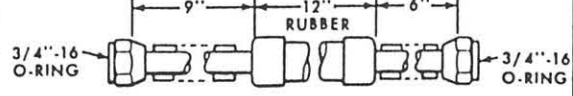

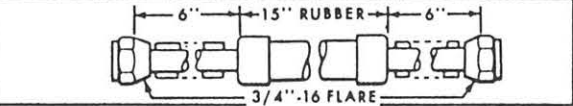

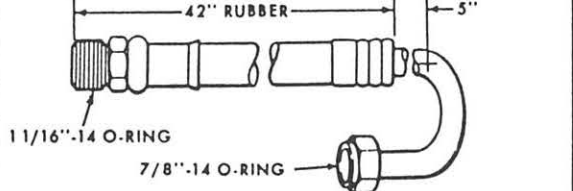

NOTE: When installing assembly, tighten coupling nut finger tight, then torque per chart below using a back-up tube wrench. Further tightening may distort fitting and result in an imperfect seal. Be sure that o-ring is in place on o-ring type fittings. Hoses must be installed with no twist in them.

		4-11	

- 7. Rework the existing hose support clamps if required
 - a. Check for correct installation and proper routing for clearance with other vehicle components.
 - b. Evacuate, charge and leak test the system following the procedure outlined in the vehicle shop manual

19C705-8 REFRIGERANT LINE REPLACEMENT and REPAIR PARTS cont'd.

To determine the correct hose part number or detail part numbers you must either:

1. Know the identification number from the existing hose.
or
2. Be able to visually identify the existing hose and select appropriate details from the Fitting Cross-Reference Chart shown on pages 14 thru 16.

Example No. 1: If the identification number is DOHA 19972-AF, the Identification Chart (on page 11) indicates (1) that the service assembly number is DOHZ 19972-K and (2) that the hose may be fabricated from 74" of 13/32" I.D. bulk hose (part number D2AZ 19C708-B), one piece of Fitting Code A44 (part number D2AZ 19D695-E) and one piece of Fitting C44 (part number D2AZ 19D695-N).

Example No. 2: If the identification number is DOHA 19867-AJ, the Identification Chart (on page 11) indicates the hose assembly is not serviced (★) and that the hose must be fabricated from 34" of 5/8" I.D. bulk hose (part number D2AZ 19C708-D), one piece of Fitting Code G56 (part number D2AZ 19D695-AD) and one piece of Fitting Code ZE6 (part number D2AZ 19D695-CE).

FITTING CROSS-REFERENCE CHART

There are three ways of selecting hose and fitting part numbers.

1. From Code Number (shown in the Identification or Application Charts) to the Part Number listed below.
2. From a visual inspection of the existing hose and selection of appropriate details using the following instructions:
 - a. Determine Fitting Size.
Diameter of tube at a point behind the nut indicates fitting size, e.g. 3/8", 1/2", 5/8" or 3/4".

Select Fittings and Splicers from the illustrations and text that follows. The necessary clamps and o-rings are included with all Fittings and Splicers and are also supplied for service as separate parts.

FITTINGS

Determine Fitting size from the information shown below:

ORIGINAL TUBE O.D.	FRACTIONALY FITTING SIZE	INDUSTRY SIZE NO.	THREAD SIZE	
			SAE 45° FLARE O-RING (FEMALE) O-RING (MALE FLARE)	O-RING (MALE SWIVEL)
5/16"	3/8"	6	5/8"-18	5/8"-18
13/32"	13/32"	8	3/4"-16	3/4"-18
1/2"	5/8"	10	7/8"-14	7/8"-18

- b. Determine Hose Size
e.g. tube O.D. is 5/16" and hose I.D. is 5/16" (size No. 6, part number D2AZ 19C708-A). Measure end of tube (not barbs). The tube O.D. matches the I.D. of the required hose

BULK RUBBER HOSE

Select the appropriate hose from the sizes listed below:

EXTERIOR PAINT COLORS

Cabs are available in prime and current production paint colors for U.S. and in prime only for Canada. D.S.O. colors are not available. These cabs must be ordered in an alternative color, and the stripes, etc., must be added locally.

Service cabs for the CL-CLT series are equipped with standard cab mountings. If the parts on the original cab are for the Easy Riding Cab Air Suspension System and are not reuseable, the following parts must be ordered as required.

Qty. Req'd.	Part Number	Description
1	E0HZ 5A118-A	Bracket (cab forward hinge)-R.H.
1	E0HZ 5A118-B	Bracket (cab forward hinge)-L.H.
2	D8HZ 5B404-A	Bracket assy. (cab mounting to spring)
2	D8HZ 5B406-A	Gusset (cab mounting spring bracket)
2	D8HZ 5411-B	Bracket (cab to frame suspension arm)

In all instances when the truck is equipped with the Easy Riding Cab Air Suspension System, parts unique to the standard cab must be replaced by either the corresponding original or a new service replacement part. All cabs have pre-drilled holes in the sub-frame for both types of cab mountings.

SKELETON CABS

The following skeleton cabs are currently available for service. These skeleton cabs are primed and include doors, they do not include glass or trim.

BODY BOLT CHART

INSTRUCTIONS

Truck bodies for Conventional Cabs (body type 81) are assembled to the frame by various bolts and related parts.

The illustrations on the next page show a typical example of a Convention Cab frame. The body bolt locations are numbered consecutively beginning at the cowl from 1 to 6 as required. For quick identification the related parts used at each location are arranged alphabetically as follows:

Absorbers Bolts Insulators Nuts Retainers Washers

TO USE BODY BOLT CHART

- 1) Determine the location of the parts required by referring to the illustrations.
- 2) Select the necessary parts listed for each location.

For example:

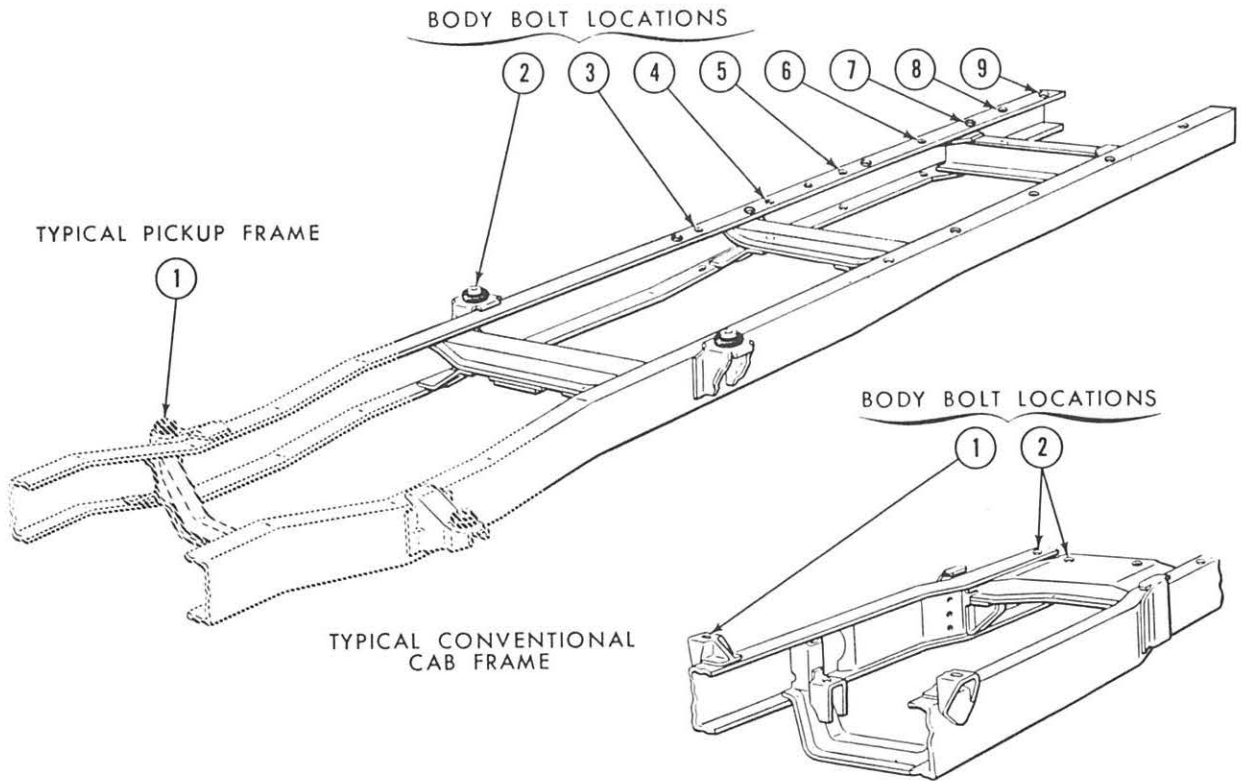

To find the parts necessary to install a 1990/ L 800 Conventional Cab at the front mount:

- 1) Refer to the illustration and determine that the front mount is the No. 1 Location.
- 2) Refer to the chart under Body Bolt Location No. 1.
- 3) The parts required are:

NAME	PART NUMBER	PART NUMBER
Bolt	58687-S2	Spacer-square D0HZ 5000130-A
Insulator	D0HZ 8000149-A	Washer-flat 44735-S8
Nut-hex. 1/2"-13	55697-S8	Washer-flat-9/16" 374049-S
Spacer-round	NS - improvise	

PARTS NOT AVAILABLE FOR SERVICE

Parts identified by a black star ★ are not available for service and must be improvised or procured locally.
